Amendments to the Specification:

Please replace the text, beginning at line 20 on page 24, and ending at line 39 on page 25, with the following amended text:

- 1. LPXTG (SEQ ID NO: 182) cell wall anchoring motifs.
- 2. LXXC (SEQ ID NO: 197) ipoprotein attachment sites.
- 3. Hydrophobic C-terminal domain.
- 4. Where no N-terminal signal peptide or LXXC (SEQ ID NO: 197) was present the start codon was excluded.
- 5. Where no hydrophobic C-terminal domain or LPXTG (SEQ ID NO: 182) motif was present the stop codon was removed.

Appropriate PCR primers were designed for each gene of interest and any and all of the regions encoding the above features was removed from the gene when designing these primers. The primers were designed with the appropriate enzyme restriction site followed by a conserved Kozak nucleotide sequence (in most cases(NB except in occasional instances for example ID59) GCCACC was used. The Kozak sequence facilitates the recognition of initiator sequences by eukaryotic ribosomes) and an ATG start codon upstream of the insert of the gene of interest. For example the forward primer using a BamH1 site the primer would begin GCGGGATCCGCCACCATG (SEQ ID NO: 183) followed by a small section of the 5' end of the gene of interest. The reverse primer was designed to be compatible with the forward primer and with a Not1 restriction site at the 5' end in most cases (this site is TTGCGGCCGC) (SEQ ID NO: 184) (NB except in occasional instances for example ID59 where a Xho1 site was used instead of Not1).

PCR primers

The following PCR primers were designed and used to amplify the truncated genes of interest.

ID5

Forward Primer (SEQ ID NO: 185)
5' CGGATCCGCCACCATGGGTCTAATTGAAGACTTAAAAAATCAA 3'
